

RAKSHAN CHINTALA

Full Stack Developer | AI-Powered Systems | Cloud-Native APIs

+91 9581812357 • rakshanch0004@gmail.com • Hyderabad, India • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 1+ years of experience building web applications, REST APIs, and AI-powered features using Java, Spring Boot, Next.js, and FastAPI. Contributed to production systems across ride-hailing and B2B SaaS platforms, including a RAG-based support chatbot built with Claude/OpenAI APIs and Pinecone, and serverless ride-management APIs on AWS Lambda. Comfortable collaborating with senior engineers, architects, and product teams in Agile environments, with a growing focus on LLM-powered applications and cloud-native backend development.

TECHNICAL SKILLS

Languages	Java, JavaScript, TypeScript, Python, SQL, HTML5, CSS3
Frameworks	Spring Boot, React.js, Next.js, FastAPI, Express.js, Node.js, KMP, CMP
Cloud & DevOps	AWS (EC2, S3, Lambda, API Gateway), Docker, Vercel, Maven, Git, CI/CD
Databases	PostgreSQL, MySQL, MongoDB, Redis, Pinecone (Vector DB), Redshift
AI & Integration	Claude API, OpenAI API, LangChain, RAG Pipelines, n8n, AI Agents
Tools & Methods	Postman, Selenium, BeautifulSoup, Firebase (FCM), pgAdmin, Jira, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Engineer

Jan 2026 – Apr 2026

Pluto-Rides — Bengaluru, India

TECH STACK Java, Spring Boot, AWS Lambda, API Gateway, PostgreSQL, Kotlin Multiplatform (KMP), Compose Multiplatform (CMP), Firebase (FCM), Git, CI/CD

- Built and deployed 30+ serverless REST endpoints on AWS Lambda and API Gateway for ride and driver management, following architecture guidance from the engineering lead, contributing to a 40% reduction in infrastructure cost
- Developed key modules of the admin panel — ride management, driver verification, analytics, and system monitoring — and helped migrate existing APIs to Spring Boot, as part of a small team
- Implemented PostgreSQL database schemas for ride matching, driver tracking, and transaction management based on designs reviewed with the team's architect, supporting 5+ entity relationships
- Built cross-platform mobile app screens using Kotlin Multiplatform (KMP) and Compose Multiplatform (CMP), reusing 70% of business logic and UI components across iOS and Android
- Added real-time GPS location tracking and Firebase Cloud Messaging (FCM) push notifications for customer and driver apps, improving response rates for time-sensitive ride events by 35%
- Implemented authentication and authorization flows with role-based access control (RBAC) across 3 user roles (customer, driver, admin)
- Set up CI/CD pipelines for automated build, test, and deployment workflows, enabling same-day hotfix releases
- Worked with product and business teams in a 2-week Agile sprint cadence, consistently delivering assigned features on schedule
- Collaborated directly with the CTO and CEO in daily standups to clarify product scope, align on technical requirements, and plan upcoming development milestones

Full Stack Developer

Apr 2025 – Dec 2025

Qontact — Toronto, Canada (Remote)

TECH STACK Java, Spring Boot, Next.js, FastAPI, Claude API, OpenAI API, Pinecone, Selenium, BeautifulSoup, AWS S3, Docker, Git, Jira

- Built a RAG-based AI chatbot for a Next.js application using Claude/OpenAI LLM APIs and a Pinecone vector database, helping cut average support query resolution time by 60%
- Built and maintained 10+ REST API endpoints using FastAPI to support core business workflows, keeping average response times under 200ms
- Built an automated web scraping pipeline using FastAPI, Selenium, and BeautifulSoup to extract and normalize data from 15+ websites into structured JSON, reducing manual data entry time by 80%
- Developed a responsive web application from Figma designs using Next.js 15, ensuring consistent behavior across major browsers and device sizes
- Used AWS S3 for file storage and Docker for containerization, contributing to a 50% drop in environment-related bugs
- Built data transformation pipelines to convert scraped content into standardized JSON, supporting 3 downstream services
- Integrated third-party APIs and webhooks to support real-time event handling
- Worked closely with senior engineers and the tech lead during sprint planning to clarify requirements and understand the technical approach before implementation

PROJECTS

Zippy — Multi-Courier Logistics Aggregator

Java 21, Spring Boot 3.3, WebFlux WebClient, PostgreSQL, Flyway, React 18, Vite, Docker

- Built a multi-courier logistics aggregator that queries 3 courier APIs in parallel using Spring WebFlux WebClient with a 5-second hard timeout, returning available quotes alongside structured warnings when a carrier fails or times out
- Implemented a two-step booking flow that verifies the merchant's selected quote against the stored price before freezing the rate and creating the shipment, preventing price tampering
- Engineered an idempotent webhook engine that normalizes carrier event codes into 7 unified tracking statuses, using a PostgreSQL partial unique constraint to suppress duplicates and a state machine to reject invalid status transitions
- Shipped a React 18 + Vite merchant dashboard with live rate comparison and a real-time tracking timeline, and containerized the backend, mock courier service, and database with Docker Compose, verified by 41 automated tests

Modular AI Agent

Python, Phidata, OpenAI, Groq, Docker, Pandas

- Designed a fully modular AI agent using the Phidata framework with dynamic tool integration and multi-model support (OpenAI, Groq), allowing the underlying AI provider to be swapped with zero code rewrites
- Built a scalable agent pipeline supporting both relational and NoSQL database connectivity for real-time querying, with Pandas-powered data manipulation for structured analysis
- Implemented NLP-driven query handling and automation workflows so natural language inputs return context-aware, data-grounded responses from connected sources
- Containerized the agent with Docker for consistent local development and easy deployment testing

EDUCATION

B.Tech — Electronics and Communication Engineering

Vellore Institute of Technology (VIT-AP) | CGPA: 7.8 / 10.0

Mar 2020 – May 2024

Intermediate (XII)

FIITJEE College | CGPA: 9.0 / 10.0

Jun 2018 – May 2020

SSC (Class X)

FIITJEE School | CGPA: 9.5 / 10.0

Jun 2017 – May 2018

CERTIFICATIONS

- Claude AI Fluency: Frameworks and Foundations | Claude 101 — Anthropic
- Data Structures and Algorithms with Java — APNA College
- Spring Boot 3 and Spring Framework 6 with Java — Udemy
- Career Essentials in Software Development — Microsoft & LinkedIn Learning
